python 公開資料

先用import連上網路

```
import urllib.request
```

```
with request.urlopen(網址) as response:
    data = response.read()
```

```
import urllib.request as request
src="http://www.mksh.phc.edu.tw/"
with request.urlopen(src) as response:
    data = response.read()#取得馬公高中網站原始碼(html css js)
print(data)
```

政府資料開放平臺

data.gov.tw /

```
import ssl #SSL 不是必要
context = ssl._create_unverified_context() #SSL 不是必要

src = "https://opendataap2.penghu.gov.tw/resource/files/2023-07-
07/c0dc7e4d826bff33f980bf5a609f8916.json"
with request.urlopen(src, context=context) as response: #context=context 不是必要的
    data = json.load(response)
print(data)
```

```
for item in data:
    print(item["澎湖縣能源補充設施設置地點"],end=",")
    print(item['地號'])
```

```
path = "C:/Users/.../Downloads/data.txt"
with open(path, "w", encoding="utf-8") as file:
    for item in data:
        line = f"{item['澎湖縣能源補充設施設置地點']},{item['地號']}\n"
        print(line)
        file.write(line)
```

澎湖縣科技執法地點 | 政府資料開放平臺

提供本縣科學儀器執法設備設置地點、測照方向及速限等資訊
